

PROBLEM

Two AI assistants can look at the same business and give different answers.

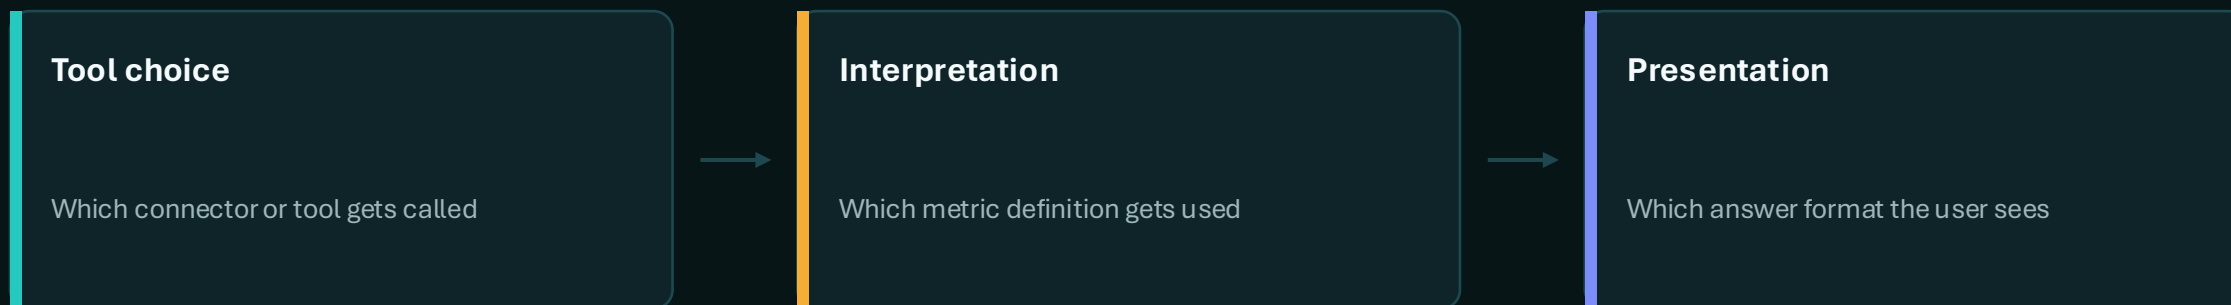

ChatGPT says revenue is up. Claude says it is flat. Both read the same QuickBooks. Nobody trusts the numbers.

Investor read. The pain is not access. The pain is correctness.

The model decides too much.

AI clients choose how data is retrieved, interpreted, summarized, and presented. That is the missing control layer.

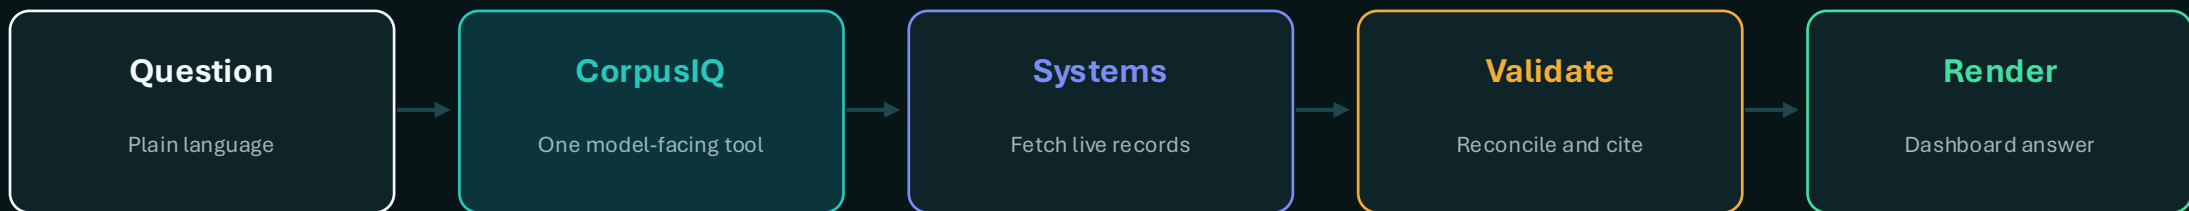

No governed layer between business data and the AI

PRODUCT

Ask your business a question. Get one correct answer. See exactly where it came from.

CorpusIQ is the governed intelligence layer inside ChatGPT, Claude, and Perplexity.

The user still talks to the AI. CorpusIQ owns the answer chain.

Connectors are table stakes. Governed answers are the moat.

The durable layer is routing, reconciliation, rendering, and fail-closed correctness.

One model-facing tool

The model makes one decision. CorpusIQ resolves the governed workflow by ID and version.

Reconciliation

Every number is cross-checked. Conflicts are surfaced. Metric definitions stay pinned.

Interactive rendering

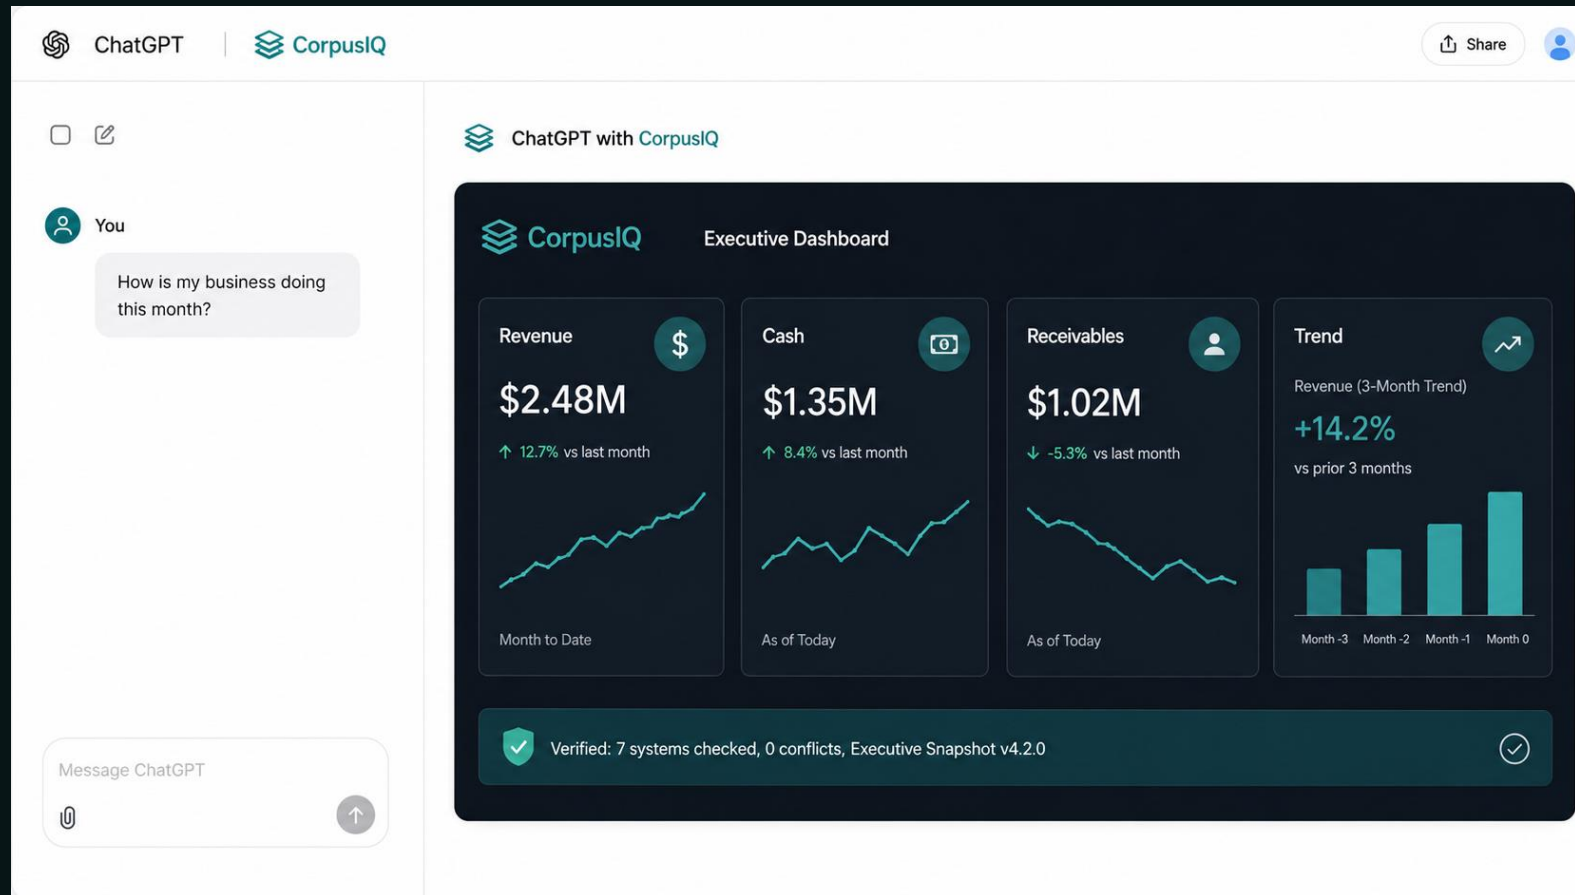

MCP Apps, Jan 2026, host supported. Live dashboard inside ChatGPT and Claude.

Fail-closed correctness

Canonical metric, validation, analysis, visualization. Never raw data to LLM to pretty dashboard.

40+ connectors matter. They are the supply. The system is the company.

One question becomes an inspectable operating answer.

TRACTION

Usage is moving from connection to governed execution.

Real users. Real MCP activations. Real token efficiency.

331

users

148

MCP connections

126.5MIL

tokens saved

Users are already connecting business systems. The next constraint is activation, training, and conversion.

Organic demand

Google organic signups are growing.

Directory proof

Listed in Anthropic connector directory.

CorpusIQ is defining the governed workflow layer MCP needs.

runbook.v1 is the open contract for required, versioned, auditable workflow execution.

Open spec

runbook.v1 published as an application-layer contract for MCP hosts.

Conformance

24 of 24 conformance tests passing.

Industry proposal

Proposal live in the MCP repository as issue #3270.

This is not a feature gap. It is the control plane requirement for enterprise AI.

Seed \$1.0M to \$1.5M.

Build the governed intelligence layer for the agent economy.

GTM conversion

Customer training

Auditable answers for regulated workflows

The round converts live usage into repeatable paid adoption.
