

Teams still reconcile five systems to answer one business question.

CorpusIQ reads live business systems, validates the numbers, and returns cited answers inside ChatGPT, Claude, Perplexity, Slack, Teams, and MCP agents.

276	123	3	146	5189	122,565,375M
total users	trials	paid	MCP connections	tool calls	tokens saved
155 active users	live conversion pipeline	billing started	technical activation	real business actions	efficiency proof

Seed thesis. AI adoption is here. The missing layer is trusted access to live business data.

AI became the work interface. Business data did not move with it.

Professionals already use AI at work. The next bottleneck is permissioned, verified access to live systems.

75%

knowledge workers use AI at work

Microsoft and LinkedIn Work Trend Index 2024

78%

AI users bring their own AI tools

Even higher at small and medium companies

37+

connected business tools

read-only access across systems

1

trusted answer layer

same permissions across every access surface

Timing claim

AI use created the interface. Fragmented business systems created the opening.

PROBLEM

Every important question still starts with manual reconciliation.

Revenue, cash, ad spend, customer records, files, and messages live in separate tools. Operators stitch them together by hand before AI can help.

Five-system answer tax

A simple question crosses Shopify, QuickBooks, Google Ads, Meta, HubSpot, Gmail, Drive, Slack, and more.

Copy, export, paste, explain

Teams move data manually into spreadsheets, screenshots, reports, or prompts. The work repeats every reporting cycle.

AI output cannot be trusted blind

If the answer has no source record, finance and compliance teams still have to verify it manually.

Dashboards show data. CorpusIQ produces cited operating answers.

CorpusIQ turns one question into a verified answer chain.

The user asks normally. CorpusIQ handles the structured work behind the scenes.

Product wedge. No workflows to build. No dashboards to maintain. No CSV exports. One cited answer.

Example. Which ad channel actually made money last week?

The question looks simple. The answer requires spend, revenue, margin, attribution, cash, and source records.

Pull spend

Google Ads, Meta Ads, TikTok Ads, campaign costs, date windows, and account filters.

Cross-check revenue

Shopify orders, GA4 sessions, Stripe payouts, QuickBooks cash, refunds, and taxes.

Calculate truth

True ROAS, CAC, attribution gap, margin risk, cash impact, and anomalies.

Recommend action

Scale, pause, shift budget, verify tracking, preserve cash, or escalate risk.

Output

A cited operating decision that finance, marketing, and leadership can inspect.

Real operators are already using CorpusIQ to make faster decisions.

Public customer proof validates the wedge. Ecommerce, operations, and finance users describe faster visibility across live systems.

Video proof

Christina Duvarney

Owner, Beautiful Disaster

“I wish I had this level of business intelligence years ago.”

Uses CorpusIQ to cross-analyze ecommerce, ads, email, SMS, traffic, and recommendations without prompt engineering.

Growth operations

Ryan Flaherty

Driven NASA

“A level of operational and marketing visibility we simply did not have before.”

Reported visibility across ads, CRM, lead generation, traffic analytics, contracts, and sales performance.

Financial services

Brian Border

loanDepot

Uses CorpusIQ for contracts, paper trail visibility, financial reporting, CRM data, and faster leadership decisions.

Investor read. The wedge is not novelty. Operators describe faster business decisions from connected live systems.

Usage shows CorpusIQ is executing business work, not attracting demo clicks.

The strongest seed signal is not user count. It is connected systems, tool execution, and repeatable operational questions.

Top business actions

GA4 reports. Gmail search. Search Console. Google Ads accounts. QuickBooks. Outlook. OneDrive. Dropbox. Klaviyo. Airtable.

Investor read

Users are asking CorpusIQ to pull reports, search systems, retrieve records, list accounts, and inspect operating data.

Seed buys the conversion machine, not another prototype.

The next milestone is a measurable funnel from qualified signup to activated trial to paid account.

90-day stage	Target	Investor test
Qualified signups	250 to 350	Marketplace, partner, and product-led demand
Activated trials	125 to 175	At least one connected source plus first cited answer
Paid accounts	25 to 40	15% to 25% trial-to-paid target
Customer stories	10	Proof from ecommerce, ops, finance, and growth
Private offers	5 conversations	Microsoft procurement path tested

Success means repeatable paid conversion before scaling spend.

Sources: Founder operating plan, current funnel, CorpusIQ pricing.

Simple SaaS pricing with expansion from seats, governance, and procurement.

All connectors are included. The customer pays for trusted answers where teams already work.

\$29.95

Solo

1 user. 30-day free trial.

\$109.95

Team

5 users. Common SMB entry.

\$189.95

Business

10 users. Additional seats priced separately.

Custom

Enterprise

SSO, SLA, governance, private offers.

75% to 85%

gross margin path

75% today. 85% at 1,000 paid users.

Direct acquisition

\$55 CAC. 2.4 month payback today. 5.1x LTV to CAC under current assumptions.

Affiliate acquisition

No meaningful upfront CAC. 25% recurring commission. Immediate contribution after conversion.

Enterprise expansion

Private offers, SSO, security review, governance, support, and vertical skills.

Sources: CorpusIQ pricing page, founder unit-economics assumptions, affiliate program economics.

Every AI assistant needs trusted access to live business data.

Start with operators who need cited answers every week. Expand into team governance, Microsoft procurement, and enterprise-grade decision infrastructure.

10K accounts

Wedge. \$120 ARPA. \$14.4M ARR.

100K accounts

SMB and mid-market. \$250 ARPA.
\$300M ARR.

5K enterprises

Private offers. \$12K ACV. \$60M ARR.

\$1B+ path

Users, governance, vertical skills,
procurement, and partner deployment.

Expansion logic

Individual operator. Team workspace. Company-wide answer layer. Enterprise governance.

Connectors are table stakes. Trusted answer orchestration is the moat.

The hard part is not reaching an API. The hard part is producing a correct answer across multiple systems with permissioning, validation, and citations.

Model vendors

Strong assistant UI and first-party connectors. Weak neutral layer across models, team chat, Microsoft procurement, and customer-controlled routing.

Connector infrastructure

Strong auth plumbing and API access. Weak operator-ready skills, answer validation, and source-cited decisions.

Automation and BI

Strong workflows and dashboards. Weak plain-English answers without workflow builds, write-scope risk, or dashboard maintenance.

Enterprise search

Strong knowledge retrieval. Weak live operational reconciliation across finance, ads, CRM, commerce, cash, and files.

CorpusIQ advantage. One MCP layer. 37+ connectors. 133+ skills. 233+ runtime tools. Read-only permissions. Source-cited answers.

Operators who build the system, not consultants who describe it.

Founder-market fit spans revenue, operations, automation, compliance, cloud architecture, connectors, and enterprise platforms.

Benoit Pecqueur. Founder and CEO

2x founder with exits. AdDynamix scaled to \$24M revenue and was acquired by Ybrant Digital and Lycos. WakeBallast acquired in 2023. Operator across SaaS, ecommerce, manufacturing, real estate, adtech, and automation.

Ted Malone. CTO

15-year Microsoft veteran. Technical architecture, MCP server infrastructure, OAuth implementation, connector development, and enterprise platform experience.

Why this team. Built distribution, security, connectors, and product before the seed. The round funds conversion.

Raising \$1.0M to \$1.5M to convert live usage into revenue.

Capital funds GTM execution, customer conversion, onboarding, and proof needed for the next institutional round.

\$1.0M to \$2.5M

Target runway. 18 months.

Use of funds

Seed milestones. 25+ paid accounts in 90 days. Repeatable funnel. 3 vertical case studies. 5 private offer conversations. SOC 2 audit path.

Sources. Founder seed target, revised operating plan, current use of funds.

Appendix A. Product proof in Claude

A plain-English question produces a structured operating answer next to a dashboard view.

Appendix B. Slack and Teams workflow proof

Same answer chain across AI chat, Slack, Teams, and MCP.
